

ST. ALBANS SCHOOL, FARIDABAD
PRE-PRIMARY
BRIEF ON CURRICULUM

OBJECTIVES

Children are born with an innate curiosity and desire to learn. Much of their brain development takes place in the early years that is the Pre-Primary years in the age group of 3 to 6 years. Our curriculum, like any other good curriculum aims to provide rich learning experiences to the children to help promote their holistic development, helping them to achieve their full potential and lifelong learning.

PEDAGOGICAL PRACTICES

Children are given ample opportunities to indulge themselves in developmentally age appropriate activities through play and hands on learning to strengthen their creativity, imagination, coordination, motor skills, cognitive skills and problem solving skills. Each concept is taken up using blended learning approach to weave in stories, rhymes, worksheets, physical activities and at times experiments to cater to the multiple intelligences of the children. More than academics, it's the life skills and getting children ready for school to learn in a joyful manner that is the focus at the Pre-Primary level.

TOOLS USED

The tools in teaching learning process help the students understand the concept well. Being able to see, hear or get involved in a topic creates a much better method for learning. The teaching tools used are various such as - hands on materials like beans, stones, pictures. Audio visuals make the class room lively and things in the nature help the students enhance their observation and awareness.

EVALUATION/ASSESSMENT

Assessment is a continuous that is on-going process . The aim of assessment is not to make a judgement about the child but to take note of his/her progress in order to improve the quality of the teaching-learning process in the class. The teacher makes individual as well as group observations and maintains records to keep a check on each child's progress.
